

Parameters- Profil SAVE/LOAD

Saving a complete profile

WinPC-NC offers a function to save and reload complete profile settings for different applications like milling, tangential cutting or 3D printing. The saved setup file includes all parameter settings of **WinPC-NC** itself and of the machine as well as defined macros and more settings.

Next to a system changeover all applications can easily be activated by selecting the corresponding setup file and the software can be properly configured.

Files with machine-set-up are marked with *.WMS and they comprise any settings concerning the machine, **WinPC-NC**, tool settings, macros, messages and additional characteristics.
